PROJECTS

HOROSCOPE SIMULATOR

The Horoscope Simulator was a group project, where we came up with an original idea and used our coding knowledge to build this app from the ground up. Using HTML, CSS, JavaScript, and AJAX, this project determines your horoscope based on user input. A horoscope API provides a horoscope, along with other fun data, such as the particular day's color and mood. The difficulty of this project was presenting the data from the API.

TODO LIST

This is a simple To-Do list that uses HTML, CSS, and JavaScript. The user can type in an action to accomplish. When complete the user can then cross out said option or remove it completely by using the left and right mouse click. The difficulty of this project was to add the actions that corresponded to the mouse clicks.

PASSWORD CHECKER

In password checker, a user inputs a password with required qualifications. Depending on the input, the password checker determines the strength of the password. The requirements were defined using variables, and conditional statements determined the strength. This project was developed entirely with C# and used in the terminal.

WORK EXPERIENCE

Sales Associate/Cashier – Total Wine & More
November 2020 – Present

- Reach daily and weekly sales goals.
- Provide strong interpersonal skills with a positive and engaging attitude.
- Work collaboratively with a team.
- Develop a strong knowledge of products and services.

Lab Technician - Anitox
June 2018 – September 2020

- Developed and organized trending data to show the proficiency of the lab, as well as any indicators of poor treatment application.
- Lead and organized experiments, while simultaneously maintaining other chemical and microanalysis.
- Assisted in developing a new sample processing system for receiving incoming samples.

EDUCATION

Biology B.S. – Georgia Southern University
May 2018
Minor: Psychology
